

# Blabberize

blabberize.com

*Animate a picture with sound*

## **what is it?**

Blabberize allows you to upload a photo, add sound/recorded message and then animate the mouth so that it appears that the image is talking.

## **educational use?**

Blabberize is a fun tool that can be used as an ice breaker during the first week of class. Students and faculty can select a picture of a person, animal, avatar or any other object with a mouth, record a message and then Blabberize it—that is, make the mouth move in the picture to say a recorded message. The topic could range from a favorite class, most memorable teacher, or a favorite color. Blabberize could also be a fun way to provide a weekly overview in an online course.

## **pros & cons?**

The best thing about Blabberize is its overall simplicity and ease to use.

## **what's it cost?**

Blabberize is free to use

## **alternatives?**

Notable competitors are Voki and Xtranormal.
